I'm going to C&P images that are the same size (based on cross-hatches), contrast (+40), and brightness (-20) so you can compare the clarity and evidentiary value of 3 images: a genuine photographed seal from a certified death certificate, the White House PDF, and the alleged photo of the seal directly from the certified birth certificate.

Genuine photo from a certified death certificate C&P'ed from a PDF file (Wow. The PDF conversion distorts the proportions. Leaves the contrast intact though, which allows the seal to be seen - the issue here.):

White House PDF:

born alive on the date and
stated above.

Date Accepted by Local Reg. | 21. | Signature of Local Reg
AUG -8 1961

Evidence for Delayed Filing or Alteration

Huffpost's "photo" from the certified birth certificate:

was born alive on the date and
hour stated above.

20. | Date Accepted by Local Reg. | 21. | Signature of Local Registrar
AUG -8 1961

23. | Evidence for Delayed Filing or Alteration
